

Electrical Objects Sorting Activity

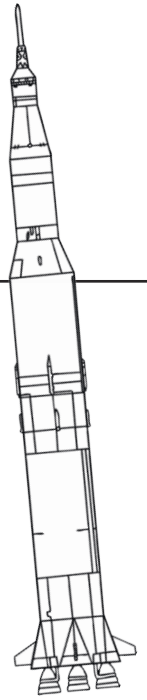

Amazing Fact

The Saturn V rocket which took the Apollo Space flights to the moon, was powered by the largest engine ever built. It generated enough power to light the entire city of New York for 75 minutes.

Challenge

Electricity is a type of power that is used to make things work.

Sort these objects into the table by those which use electricity to work, and those that do not.

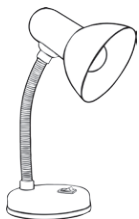

You could also try to find out:

- how much fuel the Saturn V carried;
- what happened to it after the astronauts returned to Earth;
- how it compared to other rockets;
- how it was tested.
